New in Version 2.10

The following new features are available in Version 2.10 of Web Resource:

- **Per Project Resource Rates**
Resources can now be assigned unique rates for each project and task. The default value for any newly-assigned task is the user's cost per hour setting.
- **Ability to specify each project's Project Leader**
Any resources can now be assigned project leader status. Resources with this status can be made the project leader for projects. Project leader status is used for tracking, filtering, and reporting purposes only, and grants the resource no extra permissions.
- **Default Calculation Mode**
Administrators can now specify, at the system level, which resource time option (either **Total Hours**, **Allocation %**, or **Duration**) will be automatically calculated by the other two options for a project. These values are calculated when assigning tasks to resources, or resources to tasks. The default mode can be overridden at the project level.
- **Multi-Select Project Status and Project Type filters**
User's can now select multiple items from the **Project Status** and **Project Type** filters, rather than just one or all items.
- **Skills Filter on List Resource page**
The **Skills** filter is now available on the **List Resources** page.

 Web Resource Version 2.10 is compatible with Web TimeSheet Version 8.5.

Fixed in Release 2.10.1

The following issues are fixed in Release 2.10.1 of Web Resource:

- Employees now retain their **Department** category assignment the second time they are transferred from Web TimeSheet to Web Resource. (66391)

- When the user manually edits a date (either by typing or copy and pasting) so that it uses only a single digit to represent the day or month, the date no longer reverts to the current date. (66313)
- Fixed issue that caused an error to occur when a large number of users were displayed on a calendar. (66291)
- In the **Month** view of the **Allocation Calendar**, tool tips now display correct dates, not dates one business day later. (66191)
- Correct allocation percentages now display in the **Resource Workload** report when the report data for a one week date range is generated. (66179)

Fixed in Version 2.10, Initial Release

The following issues are fixed in Version 2.10 of Web Resource:

- Resources are now listed alphabetically in the Resources drop-down on the Task Assignments tab of the Edit Project page. (65684, 65639)
- If the user enters a date that does not fit the mm/dd/yyyy system format (for example, 30/10/08), Web Resource will now set the date as that day's date, and not a random date. (65293)
- Fixed issue that occurred when transferring projects from Web TimeSheet that caused an Integration completed with 0 failures and 0 warnings message to display even though a project was not transferred because it (was) closed. (64461)
- Users can now select a project type or status from a filter, save those settings, and then delete that type or status from the system without an error occurring when they next access the filter page. (56337)
- Errors no longer occur when the date format (internationalization) settings for SQL Server are changed so they do not match the Web Resource format settings, (for example, dd/mm/yy is used instead of Web Resource's mm/dd/yy format). (64204)
