

Web Resource Release Notes

Version 2.12

Welcome to Version 2.12 of Web Resource. These release notes provide information on the new features and enhancements that have been included in Version 2.12.

New in Version 2.12

The following new features are available in Version 2.12 of Web Resource:

- **Ability to Compare Web Resource Estimates with Actual Time Data from Web TimeSheet**
You can now use Web Resource's integration tool to transfer time data recorded in Web TimeSheet to Web Resource. Once available in Web Resource, this actual data can be compared to your estimates using the new **Estimates & Actuals** report.

 You must be able to connect to the RepliConnect API before you can transfer time. Contact [Replicon Support](#) and they will enable your API connection for you.

Improvements in Version 2.12

- US113** All header data, including headings related to project sub-sections of reports, can now be included in exports to Excel if you check the new **Include header data in export** option before running the export.
- US115** Action buttons such as the **Save**, **Cancel**, and **Add** buttons are now available at the top of the page, in addition to the bottom of the page, on several pages in Web Resource. This makes these buttons easier to find on longer pages.
- US1587** In the **Skills Matrix** report, the skill names and group headings now wrap, so the report is not as wide.

Fixed in Version 2.12

- DE34** Time off hours are not subtracted correctly when Web Resource calculates a user's total hours for a project.
- DE822** If you edit the start date of a project, the end date may automatically update to a shorter project time span than the original, if the span includes a weekend.
- DE843** An error occurs if, when adding a new skill, you attempt to copy levels from a skill that has no levels defined.
- DE1064** On the **Task Assignments** tab, if you assign a task to a resource using **Advanced Search**, you can set an end date that is earlier than the start date.
- DE1082** Incorrect allocation percentages are assigned to resources when multiple resources that include blank spaces in their name, with different allocation percentages, are imported via the CSV import.
- DE1105** If you move a project that falls within the current month to a later month, the correct new **Start Date** and **End Date** month does not display when you view these dates on the **Edit Project** page.
- DE1152** When the **Resource Workload** report is exported to Excel, resource names that include a German umlaut character display incorrectly in Excel.
- DE1453** If you add a resource to a project without a **Cost/Hour** value, an error occurs.

DE 1455/DE1458 If you assign a task to a placeholder for a project, it is possible to update that project so that the end date falls before the start date.

Other Changes in Version 2.12

DE1106 Web Resource no longer supports overlapping time off bookings for a single user.

Compatibility

Web Resource Version 2.12 is compatible with Web TimeSheet Version 8.4 and higher.
