

## Web Resource Release Notes

### Version 2.13

---

Welcome to Version 2.13 of Web Resource. These release notes provide information on the fixes and enhancements that have been included in Version 2.13.

### Improvements in Version 2.13

- US2071** You can now assign a set number of hours to a resource when importing a project via the Project Import functionality. Previously, you could only assign an allocation percentage via import, by including a percentage value after the user's name in the **Resource\_Names** column: e.g. *jule[50%]*. Now, if you include a value without a % sign at that location, that number of hours will be assigned to the project for that resource: e.g. *julie[50]* will assign 50 hours to the imported project for julie.
- US2073** You can now delete multiple resources from a task assignment in a single step.
- US2119** **Category Name** and **Group Name** fields can now include up to 100 characters instead of 50; **Category Description** and **Group Description** fields can now include up to 512 characters instead of 255.
- US2120** You can now sort the **Allocation Calendar** by project and task name using the new **Allocation Display** filter.
- US2517** The full path of each project or task now displays in the **Task** column of the **Resource Conflicts** report.

### Fixed in Version 2.13

- DE2170** If you import a project with an invalid billable status, an error occurs if you attempt to edit that project from the **Project Edit** page.
- US2076** A scheduling conflict involving time off does not display on the **Resource Conflicts** report if it is the only reportable conflict.
- US2248** You can no longer edit date fields manually using your keyboard, but must select them using the calendar control.
- US2332** When dates are edited on the **Task Assignments** page, the entire page refreshes.
- US2068** Date sliding functionality is missing from the project task tree.

### Other Changes in Version 2.13

.NET Framework 3.5 is now required, at minimum.

### Compatibility

Web Resource Version 2.13 is compatible with Web TimeSheet Version 8.5 and higher.

### Contacting Support

For further information on these or any other issues, contact Replicon Customer Support using one of the following methods:
