### What's New in Web Resource Version 2.2

While there have been a number of minor fixes and usability enhancements made throughout the product, the primary changes are focused on the integration module, which provides the ability to import Web Timesheet data into the Web Resource application. With the Web Resource 2.2 release, the integration module has been completely updated and enhanced.

The integration facility allows resources and projects to be created or maintained in Web Timesheet and then transferred to Web Resource. Still suitable for use on a one-time or an ongoing update basis, the integration facility:

- Is no longer a stand-alone module but is now accessible from within the Web Resource application through the Administration menu
- Contains the ability to select specific resources or projects for transfer. Filters are available to select based on required resource or project characteristics.
- Now displays a summary of the current settings, saves settings across sessions, and saves the log file of the integration results for historical reference
- Provides improved information transfer, including:
  - For Resources: first/last name, user name, e-mail address, enabled status, hours per day, hourly rate, and (optional) group assignments. New user overrides are available for permissions and allocation percentages.
  - For Projects: project name and description, tasks, dates, enabled and billing status, and assigned users. An override option is available for replacing the dates that may have been modified within Web Resource.

### What's New in Web Resource Version 2.2, Service Release 1

The following new features are available in Service Release 1 for version 2.2 of Web Resource:

- **Increased number of resources allowed in demo version**

The demo version of Web Resource now supports planning with up to 100 resources, making it easier for larger companies to evaluate if the software will meet the needs of their organization.

### **Fixed in Version 2.2, Service Release 1**

The following previously known issues are fixed in Service Release 1 for version 2.2 of Web Resource.

- **46457**  
The drop-down list of clients provided in the Web TimeSheet Integration page is now ordered alphabetically.
- **46504**  
The number of hours reported for a project with a duration of one day is now correct.
- **46468**  
The mechanism used to round values has been adjusted to ensure consistency in report values.
