### What's New in Web TimeOff Version 1.6

The following new features are available in version 1.6 of Web TimeOff:

- **Expanded import capabilities**  
In addition to employees, users can now import holiday calendars and categories. By entering the data in a file and then importing the file, large amounts of data can be collected and added to Web TimeOff more efficiently.
- **Ability to export data to a file**  
To help with the process of editing settings, the export feature allows you to quickly generate a CSV file with the existing Web TimeOff settings for employees, holiday calendars, or categories. The exported file can then be edited and imported, eliminating the need to manually enter each and every setting when importing.
- **Support for Integrated Windows Authentication**  
Web TimeOff can be configured to use Integrated Windows Authentication, which allows users to be automatically logged in using their Windows user name and password.
- **Reporting of cost data for time off balances**  
Organizations are now better able to track the cost of any outstanding time off balances through the **Time Off Summary** report and the **Time Off Balance** report. The cost of remaining time off is based on the cost per hour specified for each employee. Access to cost data can be limited through the use of permission types.
