Fixed in Web TimeSheet 6.1 SR3

This Service Release contains fixes only for the following:

- Users running Web TimeSheet and the Web TimeSheet Integration Manager for QuickBooks, version 2.1.
- Replicon's ASP service.

If you are not part of either of the above categories, you do not need to install this Service Release.

The following previously known issues are fixed in Web TimeSheet 6.1 SR3.

Functional Area	Description of Fixed Issue
Web TimeSheet API	42264 The Web TimeSheet api did not read the clients on timesheet rows. This prevented users of the Integration Manager for QuickBooks from transferring projects set up with the bucket cost allocation method.
Web TimeSheet HTTP Header	42255 The HTTP header returned by Web TimeSheet was not entirely valid. This caused problems when using the apache proxy server.
