Fixed in Version 7.1, Service Release 4

The following issues are fixed in Service Release 4 for Version 7.1 of Web TimeSheet:

- Server error that occurred when sorting project tasks with organizational hierarchy enabled is fixed. (53265)
- An issue involving the use of regional time separator characters that prevented Web TimeSheet service from starting is fixed. Regardless of the local settings, data is now sent to the database using the regionally neutral “.” time separator that is compatible with the database. (53367)
- An issue with the datareader that caused report transactions to be left open, resulting in intermittent server errors in timesheets and reports, is fixed. (53377)
- Web TimeSheet Integration Manager for QuickBooks no longer fails to transfer data for certain timesheet periods. (53141)
- The *hierarchytaskname* field now updates correctly when importing projects/tasks using Web TimeSheet Integration Manager for Microsoft Project, Web TimeSheet Integration Manager for Quickbooks, or Web Resource. Incorrect *hierarchytaskname* causes issues with task hierarchy structure and Billing reports for imported projects/tasks. (53006)
- Error that involved saving a timesheet that contains projects/tasks, when the user was assigned to a project through department assignments only, no longer occurs. (53104)
