Fixed in Version 7.2, Service Release 3

The following issues are fixed in Service Release 3 for Version 7.2 of Web TimeSheet:

- After selecting an option from a non-required user defined field drop down list, users can now reset the field to blank. (55982)
- The `None` aggregation option has been re-added for all aggregation fields in dynamic reports. (55749)
- Holidays can now be successfully added to Web TimeSheet on a consistent basis using the `HolidayAdd` function of the Data Import Utility. (55663)
- Hours with associated comments are now correct when displayed in the **User Hours Detail** report. (55623)
- Issue that allowed users to access Web TimeSheet using paths other than `http://servername/TimeSheet/` is fixed. (55614)
- On the **Quick Add** page, users are no longer prompted to enter data in required fields in empty rows. A validation error caused this data to be required if the status of the **Supervisor** or **Based on** fields' default user had been modified (that is, if the user was no longer enabled or no longer had supervisor permissions). (55847)
- Departments listed on the **Edit User** and **Edit Multiple User** pages are no longer erroneously disabled (grayed out). (55521, 54406)
- The alphabetical sorting of projects in the **Project** drop-down in the **Add/Remove Tasks** window is no longer case sensitive. (55474)
- Totals in report grouping headers are now retained when the user edits the column order in a dynamic report. (55187)
- Reports based on the **Project/Task Progress** report template can now be generated without an error occurring, on a consistent basis. (54374)
