

Web TimeSheet Application Note

Using ODP.NET with an Oracle Database

By default, Web TimeSheet uses the Microsoft.Oracle driver when using an Oracle database. If you wish to use the Oracle Data Provider for .NET (ODP.NET) driver instead:

1. Download and install ODP.NET from <http://www.oracle.com/technology/tech/windows/odpnet/index.html>.
2. Locate the `Web.config` file in the `APP` sub-folder where Web TimeSheet was installed.
3. Edit the `repliconConnectionStrings` section of the file as follows:
 - Remove `unicode=true;` from the `connectionString` value.
 - Change the value shown for `providerName` to `Oracle.DataAccess.Client`.
4. Save the changes to the file.
