Web TimeSheet Release Notes
Version 7.5

Welcome to Version 7.5 of Web TimeSheet. These release notes provide information on the new features and enhancements that have been included in Version 7.5, as well as known issues that have been fixed in this release.

For further information on these or any other issues, contact Replicon Customer Support using one of the following methods:

New in Version 7.5

The following new features are available in Version 7.5 of Web TimeSheet:

- **Time tracking with timecards**

  Users can now punch in and punch out using a timecard to record when they are working. Timecards can be used in addition to the standard timesheet, or alone.

- **Locked version of In-Out timesheet**

  The new **Locked In-Out** time entry format requires users to punch in and punch out when they start and stop each task, and requires users to allocate that time to projects and tasks. Users cannot edit their "in" and "out" times, which ensures a reliable record of the number of hours worked is created.

- **Report scheduling**

  Users can now schedule the generation and e-mailing of any "dynamic" report available to them (except reports based on the *Timesheet List* and *Expense Sheet List* templates). Within each schedule, users can specify when to run the report, who to send it to, the report format, and how to filter the data.

- **E-mailing graphical reports**

  Just like text reports, graphical reports can now be e-mailed, either manually or as part of a report schedule. Depending on the user's e-mail client, the report may be displayed within the body of the e-mail or included as an attachment to be displayed in a browser.

- **Changes to reports apply globally**

  When users change report options, to make the updates available to all users, they no longer need to save a duplicate copy of the report under a new name. Now, when a user edits a report's configuration, the changes are applied to all users with access to the report. Users can, however, still edit their local version of the report by changing the settings within the report.

- **Additional report improvements**

  "Dynamic" reports are now easier to configure and use. Improvements include the introduction of tabs on pages used to add and edit reports, the refinement of the rules governing what report data each user can access, and the addition of the ability to sort a generated report by a column's contents by clicking on that column's name.

- **Expense receipt upload before saving the expense sheet**

  Users can now upload expense receipts when initially filling out an expense sheet, without having to save the sheet first. In addition, receipts can now be viewed from the **Summary** for each sheet or from the list of **Waiting for Approval** and **Approved** expense sheets. (53784)

- **Timesheet client selection no longer required for cost allocation projects**

  For cost allocation projects, where the allocation is based on a percentage and not user selection, the **Client** column now indicates that the project has multiple clients and prevents users from selecting a specific client. This only applies when the **Client** column is placed to the right of the **Project** and **Task** column(s); in this configuration users can choose who their time will be billed to. (53000)

- **Entry of multiple license keys during installation**

  To simplify the Web TimeSheet setup process, multiple license keys can now be entered during installation, although additional keys can still be entered from within Web TimeSheet after installation.

- **Collapsible search panels**

  The vertical search panel in the **List Projects** and **Manage Reports** pages can now be collapsed to a narrower width, creating more room for list data.

- **New themes**

  Three new themes have been added: Merlot, Mint Green, and Smoke Grey. Users can either choose one of these pre-defined themes, use them as a starting point for a customized version, or create a new theme from scratch.

Fixed in Version 7.5, Service Release 7

The following issues are fixed in Service Release 7 for Version 7.5 of Web TimeSheet:

- Fixed issue that prevented the **Project Team Assigned**, **Task Assignment**, and **Task Assignments Details** reports from generating correctly in Excel format, and from opening in PDF format. (61427)
- In DCAA enabled systems, changes the user makes to the timesheet are now saved if the user leaves the comments field of the **Modify Timesheet** dialog box blank, when the `Require comments for timesheet and timecard changes` option is disabled. (60875)
- The **Time Off Request Approvals History** page no longer shows incorrect data in the timesheet list page. (60815)
- Addressed issue that prevented a user from viewing expense receipt attachments. (60684)
- In PDF reports, summary and grouping row data now displays correctly when the `Display Row Grouping Column Headers` option is disabled. (60398)
- Expense receipts that require a browser plug-in to open, such as PDFs and Microsoft Office documents, will now open correctly. This issue only applied to Internet Explorer users using Web TimeSheet's internal web server and SSL. (61493)

Fixed in Version 7.5, Service Release 6

The following issues are fixed in Service Release 6 for Version 7.5 of Web TimeSheet:

- In the sample database, the new GST rate (5%) is now used in expense codes for which GST is enabled by default. (59475)
- When adding or editing a report schedule, more than 512 characters may now be entered in the **Send Report To** field without an error occurring. These reports will automatically be sent as multiple emails. (60463)
- The **User** filters on the **Expense** and **Time Off Approval History** pages now display only users for whom items have been approved or rejected. (The **User** filter on the **Timesheet Approval History** page already behaved in this way.) Plus, the following are no longer available to external users:
    - The **Department** and **Client** filters on the **Expense Sheet**, **Timesheet**, and **Time Off** Approvals **Waiting** pages, and
    - The **Advanced Filter** options on all Approval **History** pages. (60455)
- On the **Add/Remove Projects/Task**s page, a `<None>` option is now available in the **Client** filter for use in filtering projects with no client. (59741)
- An error no longer occurs when an Oracle client attempts to use an open connection that is in an invalid state. Instead, Web TimeSheet now attempts to reconnect until a good connection is achieved, or until it has made the defined number of connection attempts. (60148)

Fixed in Version 7.5, Service Release 6a

This service release applied to the Replicon-hosted version of Web TimeSheet only. The following issues are fixed in Service Release 6a for Version 7.5 of Web TimeSheet:

- In DCAA enabled systems, changes the user makes to the timesheet are now saved if the user leaves the comments field of the **Modify Timesheet** dialog box blank, when the `Require comments for timesheet and timecard changes` option is disabled. (60875)
- The **Time Off Request Approvals History** page no longer shows incorrect data in the timesheet list page. (60815)
- Addressed issue that prevented a user from viewing expense receipt attachments. (60684)
- In PDF reports, summary and grouping row data now displays correctly when the `Display Row Grouping Column Headers` option is disabled. (60398)

Fixed in Version 7.5, Service Release 6b

This service release applied to the Replicon-hosted version of Web TimeSheet only. The following issues are fixed in Service Release 6b for Version 7.5 of Web TimeSheet:

- Expense receipts that require a browser plug-in to open, such as PDFs and Microsoft Office documents, will now open correctly. This issue only applied to Internet Explorer users using Web TimeSheet's internal web server and SSL. (61493)

Fixed in Version 7.5, Service Release 5

The following issues are fixed in Service Release 5 for Version 7.5 of Web TimeSheet:

- In FIPS-enabled versions of Windows XP and later, users can now generate dynamic PDF reports without a FIPS error occurring. However, these reports display as unlicensed, with a watermark and message at the top of each page. (59432)

- Dynamic report buttons are now re-enabled only after a report has finished generating, allowing the report filters to be re-activated as expected, and preventing errors that occur when users select one of the report buttons before generation is complete. (59422, 58257, 58234)
- When the user edits a Promax object (on the **Edit Promax Object** page), the **Frequency** field now retains its existing setting unless the user changes it. (59132)
- When the user selects a navigation link on the **Hours worked on `<Project Name>`** page, the client name is no longer erroneously added to the page title. (59134)
- External users' substitute users are now given all appropriate permissions. (59275, 59276)
- Fixed issue that caused the heading and title to overlap in PDF reports. (58212)
- When sending an Offline expense sheet using Internet Explorer 7.0, if the user allows active content to display in the **Send to Web TimeSheet** dialog box, the **Save**, **Submit**, and **Cancel** buttons no longer become inactive. (56999)
- Fixed issue that prevented a new task selected from the **Select Task** window from updating the timesheet of users (with several approvers). (57977)
- In the **UserAdd** command of the Web TimeSheet Import Utility, currency symbols can now be used successfully in the **PayrollRateCurrency** field. (59340)
- Daily overtime rule now calculates correctly when the hourly payroll multiplier is 0. (59449)
- An error no longer occurs when a pop-up blocker prevents the Stopwatch confirmation window from opening; instead, time now accumulates in the cell that the user selected. (59442)
- Fixed issue that caused programming code to display in the **Based On** window accessed from the **User Quick Add** page. (59242)
- If a user attempts to upload a non-existent file on the **Expense Receipts > Upload** page, users are now prompted to select an existing file. (58980)
- If a valid error occurs (when, for example, the user has entered a duplicate project name) on a page containing a required, **Date**-type user defined field that uses certain date formats, when the page refreshes to show the valid error message, an additional exception error no longer occurs. (59357, 59353)
- Fixed issue that caused an error to occur when the user added a time off code, and set the **Default Accrue** to `Semi-annually` in `February, August` after initially setting the accrual to occur semi-annually on the last day of any other two months. (59241)
- In SQL Server and Oracle, the allowed text field size is now 10 characters for rates fields. (57981)
- When the user generates a **Task Status Summary** report that contains too much data, a message stating: `The report you attempted to run resulted in too much data to be viewable in a chart. Please refine your filters and try again` is now returned rather than an error. (58347)
- Fixed issue that caused an error to occur when the user generated longer PDF dynamic reports of a certain page length, and that included certain fonts. (59488)

Fixed in Version 7.5, Service Release 5a

The following issues are fixed in Service Release 5a for Version 7.5 of Web TimeSheet:

- An error no longer occurs when an Oracle client attempts to use an open connection that is in an invalid state. Instead, Web TimeSheet now attempts to reconnect until a good connection is achieved, or until it has made the defined number of connection attempts. (60148)

Fixed in Version 7.5, Service Release 4

The following issues are fixed in Service Release 4 for Version 7.5 of Web TimeSheet:

- Users can now use column grouping in any report with money columns. (59209)
- Fixed issues that prevented migration from Web TimeSheet 7.1.0.1 (SQL Express and MSDE) to 7.5.3.0 (Oracle 10g). (58807)
- During Oracle installations, the Web TimeSheet installer now correctly identifies when the Oracle schema is not empty. (58811, 58714)
- New users with Active Directory credentials whose user names contain the @ symbol now receive **Welcome** email notifications, as expected. (58768)
- Edited report names are now updated in the **Reports** permissions list, as expected. (58839)
- If the first day of the month is entered in the **To** field in the dynamic reports date picker, the **From** field no longer resets to January. (58842)
- Users are now always able to add their supervisor as a substitute user. (58624)
- The **Add/Remove Roles** window now resizes dynamically as expected on a consistent basis. (58950)
- Fixed issue that prevented users from deleting team members' roles from a project using the import engine. (59016)
- Users no longer receive duplicate timesheet overdue e-mails. (59064)
- Users can now view the **Expense Sheet List** report if the **Can View All Report Data** permission option is enabled. (59076)
- Users with first names that include embedded special characters (such as ä) are now returned in searches of users by **First Name**. (57772)
- Comments now refresh as expected in copied timesheets after the user deletes the time entry rows associated with those comments from the original timesheet. (56411)
- Imported timesheet rows are no longer duplicated when the client filter in the timesheet is set to an option other than `<All>`. (59118)
- When the user selects a **Start Date** from the timesheet calendar, the **End Date** no longer automatically updates to the selected date, and vice versa. (59120)
- In reports, the **Date Range** will now update automatically (that is, without the user having to select **Run Report**) when the user manually changes the report **Start Date** or **End Date**. (59121)
- Fixed issue that caused an error to occur when users selected departments containing the apostrophe symbol (‘) on the **Edit User** page. (59081)
- Semi-annual accruals now occur correctly. (59095)
- Fixed issue that caused Web TimeSheet to erroneously prompt for a new entry on the **User Quick Add** page after the user performed a quick add based on a supervisor, and then disabled that supervisor. (56088)
- Fixed issue that caused Web TimeSheet to terminate unexpectedly after connectivity to its database was lost. (59287)

Fixed in Version 7.5, Service Release 3

The following issues are fixed in Service Release 3 for Version 8.2 of Web TimeSheet:

- Users without historical timesheet permission can now view the **TimeSheet List** report if the **Can View All Report data** option is enabled. (57026, 58092*)
- Those using Windows Small Business Server (SBS) 2003 with Service Pack 1 can now install Web TimeSheet without being prompted to upgrade to the service pack. (58560)
- On an expense sheet, selecting one mandatory user defined field (UDF), then tabbing to another without entering any data, no longer results in an infinite loop of messages warning that the UDF is mandatory. (58581)
- Fixed issue that caused an error to occur, and expected data to be excluded, when the (IIF) **Expense Export to QuickBooks** report was generated. (49657)
- Error message no longer displays in the **Project Time Analysis** report when the user enables the *Full Hierarchy with Parent Level Sum* hierarchy display mode (from the **Format** tab) before running the report. (57785)
- Blank, non-required, number-type user defined fields (UDFs) are no longer erroneously validated when the user attempts to save **Edit Project**, **Edit Task**, or **Edit Multiple Tasks** pages; pages containing these UDFs can now be successfully saved. (56594)
- Users can now successfully install or migrate Web TimeSheet to a case insensitive database using a case sensitive database engine. (58711)
- Error no longer occurs when the user attempts to sort by **Department** on the **Waiting Timesheet Approvals** page. (57103)
- If the user is assigned to a project that they are normally prevented from viewing (due to department-level hierarchy filtering), clients now display, as expected, in the **Client** drop-down of the **Select a Client** window. Plus, selecting **OK** in the window no longer results in an error. (58710)
- New users added via **Quick Add**, and set up with authentication types other than Web Timesheet, now receive e-mail notifications as expected. (58523)
- Users are no longer erroneously allowed to save expense receipts for expense items that have no other information (such as **Date Incurred**, **Description**, or **Amount**) entered against them. (55876)
- On the **Filters** tab of the **Edit Report** page, after the user adds filters, and then later removes them by selecting **Reset to Defaults**, they no longer have to refresh the report page to view the default filters. (58207)
- The **User Group** reports filter now works as expected on a consistent basis. (58788)
- Column headers now match up correctly with data columns in reports exported to Excel. (58397)
- Web TimeSheet now automatically punches out Locked In-Out timesheets as expected. (58787)
- In reports that display billing information (such as the **Project Time Analysis** report), if a user enters non-billable hours against a project in a non-base currency, a value of 0 in the base currency no longer erroneously displays in addition to the correct value in the **Billable** column. (57940)
- When adding or editing a report schedule, if users enter AM times as the **Initial** or **Next Run Time**, these times are now saved and displayed as expected (that is, not as PM times), on a consistent basis. (58591)

- In ASP instances, Web TimeSheet is now able to check that the **To:** address in offline timesheet e-mails matches the address setup for the server, which ensures that the timesheet is received by the server. (58809)
- Fixed issue in Oracle that caused an error to occur when users entered comments of more than 2000 characters. (58728)
- Windows authentication users can now enter login names of up to 47 characters without an error occurring. (56326)

Fixed in Version 7.5, Service Release 2

The following issues are fixed in Service Release 2 for Version 7.5 of Web TimeSheet:

- An error no longer occurs after a user performs a search on the **Manage Reports** page, then immediately selects the **Edit Folder** or **Delete Folder** button, while **Search Results** is highlighted. (57949, 57950)
- In the **Date Range** filters of dynamic reports, month, day, and year numerals in dates are no longer erroneously separated by "\" and "/" symbols. (58004)
- After upgrading systems licensed for **User Groups**, an unexpected error no longer occurs in dynamic reports that have a specific date range (that include actual dates) selected. (58008, 58288)
- In in/out timesheets that have default values entered in row-level user defined fields, users who have already saved their timesheet are no longer prompted to save it when they leave the timesheet. (57807)
- Comments that include line breaks now display with line breaks in the standard timesheet's **List Comments** box. (57258)
- An error no longer occurs when users with browser *AgentString* values (in the Web TimeSheet database **UsageStatistics** table) of greater than 255 characters attempt to log into Web TimeSheet; Strings longer than 100 characters are now trimmed to 100 characters to fit in the table. (57224)
- Users can now set 12:00PM as the next run time for a scheduled report without an error occurring. (57876)
- In the ASP version, an ActiveX security warning no longer displays when those using Internet Explorer on a computer with Microsoft Office installed view the ASP license agreement. (58176)
- E-mail notifications are now sent as expected to all users in the system who have overdue timesheets, on a consistent basis. (58002)
- In ASP databases, server errors and crashes will no longer occur when the Project Detailed (Task) report is generated for projects that have multiple billing rates. (58125)
- Installation of Web TimeSheet on the Windows Vista operating system is now supported for installations using the internal web server. (58086)
- Fixed issue that prevented users from using the import engine to add departments to a project and assign a rate, via the #PROJECTRATEADD and #PROJECTTEAMRATEADD fields. (58120)
- Clients using localized versions of Windows, that use localized time zone text, can now install Web TimeSheet without an error occurring. (58001)
- Fixed issue that prevented the Timesheets are overdue (Batch) notification from being sent to the Supervisor. (58266)

- Fixed issue that erroneously allowed a user with only Timesheet and Report (one report only) permission, who was not a Project Leader, to view report data for all system users when organizational hierarchy was enabled. (58225)

Fixed in Version 7.5, Service Release 1

The following issues are fixed in Service Release 1 for Version 7.5 of Web TimeSheet:

- In a timesheet row, when the **Client** is selected by keying in the first letter of the client's name, the **Project** drop-down list box now properly refreshes. (57661)
- **Repeat Offenders** section of the ProMax module is no longer affected by future, unsaved timesheets. (57659)
- Users can now search for projects in the **List Projects** page using number- or date-type user defined fields. (57655)
- Resolved issue which incorrectly required users to select a **Client** in a timesheet row. (57833, 57826)
- Substitute approvers are correctly indicated in the **Timesheet List** report. (57612)
- The **List Projects** page now loads properly when a project name ends with a back slash ("\"). (57286, 57281)
- Addressed issue with users being unavailable for addition to the **Project Team** after upgrade. (57662)
- The timesheet displays properly regardless of the date format configured on the client machine. (57577)
- In the **Add/Remove Tasks** pop-up window, bucket method projects are now being properly filtered when a **Client** is selected. (57828)
- Resolved error when using the **Get More…** option in the **Project/Task** drop-down list in timesheets. (57048)
- Adjusted the **Current Timesheet Period** and **Last Timesheet Period** options in dynamic report date filters to be based on all timesheets in the system, not just the user's timesheet. (57370)
- The delimiter used to separate values in Excel format dynamic reports can be configured in the `Web.config` file, as detailed in this application note. (57555)
- Resolved issue with the summary of number-type user defined fields in dynamic reports. (57386)
- The page number in **List Projects** page is maintained after editing a project. (57481)
- Addressed issues related to saving the **Authentication Type**, password, or domain for users. (56990, 56994, 57167, 57039, 57010, 56986)
- When adding a row in an offline timesheet, if the activity selected in the previous row is now disabled, the new row will not include the disabled activity. (57102)
- The receipt list within an expense sheet can now be viewed without error when the **Description** field is blank. (57214, 57287, 57156)
- Addressed issues with file names for QuickBooks IIF reports. (57275, 57276)

Fixed in Version 7.5a

The following issues are fixed in Version 7.5a of Web TimeSheet:

- Issue that prevented Web TimeSheet installations from retaining IIS status when they were upgraded to version 7.5 is fixed. (57321)

- Issue that prevented users without supervisors from displaying in certain lists and reports, such as the **Available Project Team Members** list on the **Create Project Team** page, is fixed. (57345, 57352)

Fixed in Version 7.5

The following issues are fixed in Version 7.5 of Web TimeSheet:

Admin

- Users can now consistently delete, as part of a mass-delete, a time off code that is not in use without the following error message displaying: *This Time Off code is still in use, you can not delete it*. (53916)
- When a user has added a column that requires selection of a currency to the **User Quick Add** page (via the **Settings** button), they can now quick add nine users without being prompted to add a tenth user. (52845)
- The **Time Off Code** filter is now available for use in searches on the **List Users** page. (52544)
- When **Split project/task into two columns on timesheet** is cleared on the **System Preferences** page, at least one of the options under **Choose for Client Name Display** on the **Edit User Preferences** page must now be enabled. (55631)
- When the pop-up user list style is enabled, the correct list of users now displays in the specific user list on the **Add Approver Type** page. (53550)
- Fixed issue that prevented selected members from displaying under **Group Members** on the **Edit User Group** page. (57008*)
- The default value for **User** user defined fields now displays on the **Edit User** page for users added via **Quick Add**. (52869)
- When adding an external user for the first time, users are no longer prompted to first enter clients when clients have already been added. (52642)
- Changes to the default currency are now displayed correctly on the **Quick Add** page. (52680)
- Selecting the *<Any Letter>* filter option on the **User Select** pop-up window (accessed by choosing *Select Other User* from the **Client/External Approver** field on the **Edit Multiple Projects** page) now displays all external users. (53679)
- Users are now prevented from adding non-numeric characters to the numeric fields (such as the **Allowed** field), in the **Time Off** section of the **Edit Multiple Users** page. (46431)
- Users are now prevented from erroneously creating timesheet periods for departments that are disabled and adding users and external users to disabled clients. (53857, 53867, 55696)
- Fixed issue that caused a user's timesheet period type (for example, weekly) to revert to the administrator's timesheet period type (for example, monthly). (54154)
- Fixed issue that caused the text *#cstring:#* to display in place of a user's primary department on the **Edit User** page. (55968)
- When adding a new user, changes made to the **Hours Per Day** field on the **Edit User** page are now retained after the user edits other fields on the page, without the user having to first save the page. (52662)
- Fixed issue that caused the initial user rate to be deleted when new rates were added. (53438)

Project

- Issues involving incorrect project leader access permissions were resolved. (54404, 57000, 55092)
- Users with the correct permissions can now view all expected group members in the **Edit User Group** pop-up window while in **View** mode. (55882)

- Fixed issue that allowed users with **View** permission only to access and update the **Project Structure** page. (55072)
- If a parent-level project/task's **Project Status** is set to **Closed** on the **Edit Project** page, all its child entries will now display as grayed out on the **Project** page. (53692*)
- Searches in the **Name** field of the **Clients** page filter involving Unicode characters are now properly supported. (53806)
- After the first client assigned to a multiple client project is disabled, the project's allocation percentages now display correctly on the **List Project** page. (49098)

TimeSheet

- The **Timesheet Awaiting Approval** report is now included in the external user's default permissions. (52084)
- In Internet Explorer version 6.02, the minimize arrow in the bottom, right-hand corner of the offline timesheet comments pop-up is now visible, allowing users to minimize the pop-up. (54482)
- Fixed issue that caused inaccuracies in a user's time off data after an initially-entered time off type was changed. (56022)
- Fixed issue that caused the time off code to change in a rejected time off request for an approved timesheet. (53791)
- Fixed issue that caused an error to occur when the **Manage Favorite Projects/Task List** was opened then saved without the user first editing anything. (53372)

Expense

- Fixed issue that allowed approvers empty, then approve an expense sheet, and thereby caused error lines to display in the **Expense Sheet List** report. (53962)
- On the **Edit Expense Code** page, if the user clears the **Gross to Net Formula** field and selects **Save**, that field update will now be saved. (53816)
- Read-only lists of expense receipts are now available on the **Waiting for Approval**, **Approved**, and **Rejected** expense sheet pages, and on all expense summary pop-up windows. In addition, users can now upload or delete receipts from the **Expense Sheets - Rejected** page. (53784)
- Some minor usability issues involving the **Expense Receipts** window have been addressed. (53885, 55069)
- Users with **View** permission only can no longer edit or select user defined fields, or upload or delete receipt images, on the **Expense Sheet** and **Expense Details** pages. (52311, 54081, 54042, 54042)

Reports

- All reports that include hierarchy-based fields now include a **Hierarchy Display Mode** option (under the **Format** settings tab). Users can choose to display reports in either *Collapsible* format (hierarchy is collapsible, with no summaries of visible levels) or in *Full Hierarchy with Parent Level Sum* format (hierarchy is fully expanded, with sum totals displayed at the lowest parent level). (54174)
- The following report templates with identical fields and filters have been deleted: **Expense Awaiting Approval** and **Expense Status** (duplicates of **Expense Details**), **User Permissions**, and **Substitute Users** (duplicates of **User Profile**), and **Time Off Request Awaiting Approval** (duplicate of **Time Off Request Details**). (53747)
- **PDF Font Size** and **Place report header on separate page** option fields are now available on the **Format** tab (accessed via the **Settings** button) for dynamic reports for use in customizing PDFs. (54830)

- To expedite their use in calculations, dollar amounts in dynamic reports are now exported to Excel with the numeric amount and the currency in separate fields. (53380)
- A **Settings** button is now available in graphical reports. (55644)
- Number format settings, such as decimal precision settings, are now applied to CSV report output files. (55566)
- When users update report settings, they may now choose either **Save & Run Report**, to see the changes immediately in the report, or **Save**, to see the changes only when the report is later run. (55261)
- **Include report header in Excel version** option is now available on the **Format** tab in the **Edit Report** window (accessed by selecting the **Settings** button). (52395, 52284)
- The **Timesheet Hours Details** report now displays time off data, plus a *<none>* option is now available in the **Project** composite filter when **Select specific projects** is enabled. (54123)
- Private reports now have the same access level as the report from which they are saved, whether the original report was private or public. (56735)
- The reports icon now displays in the top menu for all users who have any reports enabled in their permissions. (56476)
- The name of the template the report is based on now displays on the **Edit Report** page. (55730)
- Various improvements have been made to dynamic report filters. (48512, 53906, 55463, 53353, 54123, 53958, 55641, 55908, 55255, 53929, 55863, 49331)
- On the **Manage Reports** page, users can now mass-delete reports by `Ctrl`-clicking on the reports to be deleted, and selecting the new **Delete Report** button. (54336)
- The list of reports in the **Reports** side menu now refreshes after you delete a report, so users can no longer select deleted reports and thereby induce an unexpected error. (53850)
- The **Timesheet Billing** report's **Rate Type** filter now displays and functions correctly. (54131)
- The **Project Status** report no longer displays expense data if no **Expense** license key has been entered. (54127)
- Deleted user defined fields no longer display on the report settings **Column Order** tab. (54033)
- In new installations of Web TimeSheet, the **User** filter is now available when selected in **Settings** for the **Approval Path** report. (54112)
- Taxes are now correctly accounted for in calculations of expense amounts in all dynamic reports. (56738)
- Resolved issues that resulted in minor data inaccuracies in the **Project Status**, **Project Status Summary**, **User Hours Details**, and **Task Status Summary** reports. (54125, 55963, 54342, 54663, 53849, 56505)
- The **Timesheet Status Details** and **Timesheet List** reports now show the same data consistently for all timesheet periods. (54683)
- In the **Project Status** report, for each task, the **Percentage Complete** column now displays the percentage completed of the total estimated hours for that task, and not the percentage completed of the project's total estimated hours. (54313)
- When a single project with no tasks is selected from the **Project** filter, the actual project hours now display in the **Task Status Summary** report. (53956)
- In **Expense** reports, tax amounts are now added to amount totals to yield the correct net amounts. (56637)
- New fields selected from the report's **Fields** tab now display immediately on the **Column Order** tab without the user having to first save the new settings, and then re-open the **Settings** window. (54149, 54170)
- Fixed issue that caused error to occur when dynamic report filters were set to use a **Date Range** of *Current Timesheet* or *Last Timesheet*. (54394)

- Fixed issue that caused error to occur when generating a report based on the **Time Off Awaiting Approval** report. (54350)
- In reports, if the open quotation marks character (“) is included in the **Comments** field cell, the contents of the cell directly to the right are no longer displayed in the **Comments** cell. (56998)
- Report summary option settings are now retained when the user changes column order. (54637)
- Fixed issue in the **Awaiting Approval** report that caused an error to occur when the user enabled the **Timesheet Period** field, generated the report, and then selected any record. (56518)
- An unexpected error no longer occurs when the user attempts to delete the **Time Off Reports** folder. (56041)
- Fixed issue that caused certain e-mail reports to become corrupted in transit. (53781)
- Fixed issue that caused an error to occur when a user generated the **User Detail** dynamic report while three other users were logged in. (55483)
- **Sort By** rows can now be added to the **Define Columns Sorting** heading (on the **Column Order** tab of the **Edit Report** window) without an error occurring. (55535)
- If the user has not generated a current timesheet period, all timesheet data will no longer erroneously display if the **Current Timesheet Period** option is selected from the **Date Range** filter in reports based on the **Timesheet Status Details** report. (55093)
- In SQL databases, the Quickbooks **Expense Export** report no longer displays data from outside the selected date range. (54285)
- **Client Rep** data now displays as expected in the **Project/Task Progress** report when an external user is selected as the project’s **Client/External Approver**. (55900)
- Fixed issues that caused incorrect users and projects to display in the **Select specific projects** and **Select specific users** filter fields. (53974, 53839, 57121)
- An error no longer occurs when the user selects the **Select specific projects** field from the **Project** filter in a report based on the **Project/Task Progress** report. (56300)
- If a time off code is blank in a user’s **User Profile**, then the **Year (As of (Date))** and **Week (As of (Date))** fields for that time off code will now be blank (rather than display *1899* and *Week 53*, respectively). (53757)
- Fixed issue that caused an error to occur when a user selected the **Settings** button while a report was generating. (55536)
- Timesheet row-level user defined fields now display as expected in the report **Fields** settings in **Time Off** reports. (56805)
- Billing data is no longer displayed in reports when the **Use billing information** option is disabled in **System Preferences**. (56630, 55888, 54414, 56441)
- Columns have been added to certain dynamic reports that were added in Web TimeSheet 7.1 so that they more closely match the Classic reports on which they were based. (53842)
- In the **Project Time Analysis** report, the totals for **Project Remaining Hours**, **Task Estimated Hrs**, and **Project Estimated Hours** are now always correct, regardless of what **Summary Options** are selected. (55722)
- In all reports that have a <*None*> summary option, when totals are selected in **Settings**, totals now display in the report. (54114)

Config

- Changes to the **User Days Off** settings on the **User Config** page now take effect as soon as they are saved. (46204)
- Users are now prevented from adding a number greater than 50 to the **Number of tasks listed in the task drop-down list** field on the **Edit User Preferences** page. (53645)

- An error message now displays if a user disables all **Timesheet Name Display** fields on the **Edit User Preferences** page. (55373)

Miscellaneous

- On the **Approvals** page, in the **Waiting** side menu, the red indicator flag now displays beside **Expenses** when expected on a consistent basis. (52329, 54095)
- Fixed issues involving the display and use of special characters, such as <, >, &, and +. (54084, 56574, 52852, 54040, 56574, 54549)
- A few minor issues involving incorrect user access permissions were resolved. (52254, 53623, 52901, 53621, 53793, 54094)
- *Disabled* status of rates, users, clients, and departments is now better indicated in Web TimeSheet. (53854, 53863, 55392, 56238, 52674, 53913, 53860, 54202, 55993)

Data Import Utility

- Timesheet in and out times can now be imported into Web TimeSheet via the import utility using the **#TimesheetAdd** command, and both the **InTime** and **OutTime** fields, or both the **InTime** and **Duration** fields. (56688)
- When using the **#UserUpd** command of the import, **LoginName** is now the only required field – **Client** (when updating external users) or **Department** are no longer required. In addition, the **Force password change on next login** field is no longer automatically enabled after changing the password for an existing user. (53037, 54116, 54705)
- Users can no longer assign external user permissions to a regular user using the **#UserAdd** command of the import utility. (52304)
- When using the import utility, **ActionType** is no longer a required field when using the **#PermissionDel** command, nor is it required when renaming or changing the enabled status using the **#PermissionUpd** command. (54259)
- The **#PermissionAdd** command of the import utility has been fixed, and now includes an **IsExternalUser** field to allow for import of external user permissions. This new field is not required, and is set to *No* by default. (54268)
- Fixed issue that prevented *Client* from being added using the **#PermissionAdd** command via the import utility. (54348)
- Fixed issue that caused an error to occur when the **#PermissionAdd** command was used in the import utility. (57117)
- External users added via the import utility are now assigned **External User**, not **Timesheet**, permission by default. (54118)
- Tax codes can now be deleted using the **#TaxCodeDel** command of the import utility without a *null value is not allowed* error occurring. (54210)
- Fixed issue that caused unexpected results when adding (using the **#ProjectRateAdd** command) and deleting (using the **#ProjectRateDel** command) project rates via the import utility. (54173)
- Fixed issue that prevented the enabling of Promax and report permission actions for external users via the import engine. (54338)
- Resolved issues involving importing departments and activities via the import utility when parent departments and activities, respectively, are disabled. (54680, 56713)
- Tasks/projects that only allow the **Billable** value to be used as a **Billing Option** can no longer be erroneously updated to **Non-billable**, using the import utility's **#ProjectAdd** field. (54083)
- Departments that do not already exist can now be added using the **#DeptAdd** command in the import utility. (54110)

- When using the import utility, holiday icons can now be added and updated successfully (using the **#HolidayAdd** and **#HolidayUpd** commands); imports using the **#HolidayAdd** and **#HolidayDel** commands are also now successful. (57112, 54332, 54203)
- Users are no longer erroneously able to add, update, or delete expense codes, tax codes, clients from projects via the data import utility in systems with no valid expense license key. (54700, 54701, 54707, 54703)
