Web TimeSheet Release Notes
Version 8.5

Welcome to Version 8.5 of Web TimeSheet. These release notes provide information on:

- Features and enhancements new to this version
- How Web TimeSheet data will be migrated upon upgrade to this version
- Issues that have been fixed since the last release
- Version compatibility between Web TimeSheet, its Integration Managers and Web Resource

This document also includes release information for the following QuickBooks and Microsoft Project integration managers, which are compatible with this Web TimeSheet release:

- Billing Integration for QuickBooks Version 4.2
- Integration Manager for Microsoft Project Version 4.2

New in Version 8.5

The following new features are included in version 8.5 of Web TimeSheet.

New in Both Editions of Web TimeSheet

- **New License Update Process**
  Upon upgrade to Web TimeSheet version 8.5, users can enter an activation code in the installer that allows Replicon to update the license information in your database. This allows you to upgrade to Versions 8.5 and higher without having to use a license key or file, and lets you choose to update your license information in the application any time you make changes to your licensing.

- **Password Expiry**
  Administrators can now require users to periodically change their Web TimeSheet password. Forcing users to change their passwords on a regular basis improves password security. Passwords can be set to expire monthly, quarterly, semi-annually, or yearly, or to never expire.

- **New Report Permissions**
  Four new report permissions (three in the Project & Billing Edition, one in the Time & Attendance Edition) are now available that provide more options for limiting users' ability to view cost, billing, and payroll information in reports.

- **System E-mail Setup**
  The system errors and warnings e-mail notification is now listed under **Advanced** on the **E-mail** tab of the user profile, along with the option to enable the receipt of broadcast messages. As of Version 8.3, the system errors and warnings e-mail is disabled by default since this option is only intended for users with the authority and permission to take action when an issue arises, such as system administrators. These changes help prevent this option from being accidentally enabled for standard users.

- **Separate Currency Type and Amount columns in Excel Exports**
  Using a **User Preferences** option, users may now choose whether they want **Currency** and **Amount** data exported to Excel in a single column or in two columns.

New in the Project & Billing Edition

- **Web TimeSheet Billing Integration for QuickBooks Version 4.2**
  Version 4.2 of the QuickBooks integration manager can be downloaded from within Web TimeSheet version 8.5. Select this link for information on new features and fixes included in this release.

- **Web TimeSheet Integration Manager for Microsoft Project Version 4.2**
  Version 4.2 of the Project integration manager can be downloaded from within Web TimeSheet version 8.5. Select this link for information on new features and fixes included in this release.

- **Limitation of External User access to Report Data**
  To improve data security and report usability, stricter limits have been placed on what data external users can access in reports. External users can still view data and projects associated with their clients, but are now more strictly prevented from viewing other clients (even in multiple-client projects), payroll or cost information, user details, and company structure. In addition, now only reports external users can actually use are available for assignment to them.

New in the Time & Attendance Edition

- **Banked Time**
  Users may now be allowed to bank overtime hours. Accumulated banked time can be used when booking or entering time off. This option can reduce the amount of overtime an employer has to pay, and may be considered a benefit by employees who want more time off. When banked, overtime hours are multiplied by the applicable pay code factor.

- **Maximum Overdraw for Time Off**
  Some companies allow users to book time off that is not yet available to them, while other companies do not allow users to make bookings that would result in a negative time off balance. The maximum overdraw option allows administrators to specify:
  - Whether users can incur a negative balance against a time off type, and
  - How large a negative balance is allowed (if applicable).

- **Automatically Populated Holiday Time**
  Administrators can now choose to automatically populate users' timesheets with their holiday hours. If this option is enabled, a time off booking for the user's hours per day value will be automatically created and approved for each holiday. Enabling this option saves users from having to manually book off holidays, and ensures holidays are booked off using the correct time off type.

- **More Options for Exporting Time Off Bookings to Outlook**
  The following new options for exporting time off to Outlook are now available:
  - Users can export single approved time off bookings or entries to Outlook, using a link in the time off booking or entry form.
  - Non-booked time off (that is, time off that users enter directly into their timesheets) can now be viewed and exported to Outlook from the time off calendar.
  - Time off bookings no longer need to be manually imported into Outlook 2003. Exported bookings are now automatically added to Outlook, as they have been for Outlook 2007 in past versions of Web TimeSheet.

- **User-selectable default Time Off Type**
  Users can now choose which time off type is selected by default in the time off type drop-down list in the user's **Time Off Calendar**. Setting this default helps ensure time off is booked against the appropriate time off type.

- **Revision of the Time Off Booking has been cancelled E-mail Notification**
  The **Time off booking is cancelled** e-mail notification is now called **Time off booking is deleted**. It is now sent whenever a booking is deleted, to everyone who viewed the booking (the user the time off was booked for and any approvers), though not to the user who cancelled the booking. The content of the other time off notifications has also been modified slightly.

- **Optional prorating of Time Off Accruals**
  Administrators can now specify whether or not accruals should prorate (that is, users "earn" accrued time off, proportionate to the amount of time worked since the last accrual or the policy effective date) for each time off policy.
- **Whole hours granularity when booking Time Off**
  <*None*> and *Full Hour* options are now available in the **Minimum amount of time off required in bookings** system preference. These replace the *Hours* option. If <*None*> is selected, users can make bookings for parts of hours (for example, 0.75 or 2.25 hours), but if *Full Hour* is selected, they must use full hour increments (for example, 1, 2, or 4 hours).
- **Option to log changes for DCAA each time a timesheet is saved**
  When DCAA is enabled, you can now elect to have timesheet changes logged "always" (that is, with every save, prior to submission), or only after submission.

Migration Notes

The table below outlines how existing data will be migrated for those upgrading to Version 8.5.

Feature	Settings after upgrade
User-selectable default time off type	The default will be set to *Vacation*, if it exists, and <*None*>, if it does not, for all user preferences and their default settings.
New report permissions	The new permissions will be enabled by default in all existing permission profiles in which they are available.
Optional prorating of time off accruals	If upgrading from version 8.2 or 8.3, prorating will be enabled in all time off types or user policies with accrual settings. If upgrading from version 7.5 or earlier, prorating will not be enabled in any time off types or policies.
Whole hours granularity when booking time off	If the existing setting was *Hours*, <*None*> will be selected. Note, this is just a new name; the functionality will be unchanged.
Unapproved time off requests	If upgrading from version 8.2 or earlier, unapproved time off requests that belong to an open timesheet, and that do not overlap with existing time off, will be re-created as rejected time off bookings.

Fixed in Release 8.5.4

The following issues are fixed in Release 8.5.4 of Web TimeSheet:

Fixed in both editions of Web TimeSheet

- The *Years* column is no longer erroneously consolidated (summed) in the **Expense** and **Timesheet Raw Data** exports. (67374)
- Administrators can now edit license seat assignments via the **Edit User** page and the **Application Seat Assignments** tab of the **System Information** page in upgraded databases for which all licenses have been exceeded (i.e. all licenses have too many seats assigned). (67253)
- Fixed issue that caused Web TimeSheet to freeze while saving expense sheets when using certain configurations of Internet Explorer. (67363)
- Databases upgraded from version 7.1 or earlier are now correctly labeled as release versions. This information is typically only used by Replicon Support when troubleshooting issues. (67368)

Fixed in the Project & Billing Edition

- If *(1)* on their timesheet, a user creates rows (including clients) for a project they are assigned to, and then *(2)* the user is removed from the project, and then *(3)* the client is removed from the project, that timesheet can now be submitted successfully. (67131)

Fixed in the Time & Attendance Edition

- Department names that contain a single quote (') character now display according to hierarchy filtering on the time off calendar. (67215)

New in Release 8.5.3

The new feature described below is included in release 8.5.3 of Web TimeSheet's Time & Attendance Edition.

- **Ability for Time Off Users to Bank Flex Time**
  Users may now add time worked to their time off balance by entering negative values in time off bookings. Once approved, the absolute amount of the booking is added to the user's balance for that time off type. This feature allows users who do not use a timesheet to bank flex time for holidays they work. (66856)

Fixed in Release 8.5.3

The following issues are fixed in Release 8.5.3 of Web TimeSheet:

Fixed in both editions of Web TimeSheet

- Users assigned to multiple departments no longer display multiple times in the **User Select** pop-up windows. (66590)
- If the user selects **Save** in the **Approval Waiting Settings** window, the window now closes as expected; a timesheet no longer erroneously opens in that window. (66923)

Fixed in the Project & Billing Edition

- A new Internet Explorer browser no longer opens and closes when the user selects a link for downloading an integration manager on the **Integration** tab. (65983)

Fixed in the Time & Attendance Edition

- Fixed issue that caused an incorrect number of overtime hours to display in the collapsed state of the hours detail summary (top, right-hand corner of the timesheet), when the user had been assigned multiple overtime rules. (66728)
- Fixed issue that sometimes prevented a timesheet's approval status from immediately updating in the **Payroll Summary** report, when the user submitted the timesheet without first saving it, and if the user had a time off license, but no overtime rule. (66699)
- If a user made one booking before an accrual date, and one after, and the time off policy had a negative balance before the first booking, hours remaining now displays correctly on the timesheet on which the first booking appears. (66790)

Fixed in Release 8.5.2

The following issues are fixed in Release 8.5.2 of Web TimeSheet:

Fixed in both editions of Web TimeSheet

- Fixed issue that prevented migration from Web TimeSheet version 8.3 to version 8.5. (66298)
- Scheduled reports using the **Timesheet Period Start** and **Timesheet Period End** schedule types are now generated and sent only once on their scheduled day, as expected. (66297)
- Fixed issue that prevented some classic reports from being migrated to the dynamic report format during upgrades from version 6.7 to version 8.5. (65286)

Fixed in the Project & Billing Edition

- Fixed issue that caused a user added via **Quick Add**, and based upon an existing user, to be erroneously assigned to projects (although not to tasks). (66451)
- Fixed issue that caused data in the Integration Manager's default configuration file, including Microsoft Project server configuration information, to be overwritten when that file was accessed by the Integration Manager's auto update service. (66568)

Fixed in the Time & Attendance Edition

- If hierarchy filtering prevents an approver from viewing other approvers who fall after them in a time off approval path, those other approvers are now required to approve time off when that path is used, as expected. (66256)
- User can now select the timesheet link in a time off waiting for approval e-mail notification while logged in to web timesheet without an error occurring, providing a complete Web TimeSheet URL has been entered in System Preferences (for example, `http://IP_address:port_number/TimeSheet/`) (65239)
- Fixed memory leak related to validation and overtime rules. (66402)
- Fixed issue that caused the **Month** view of the user's **Time Off Calendar** to load very slowly in some situations for users who were assigned many time off types. (66288)

Fixed in Release 8.5.1

The following issues are fixed in Release 8.5.1 of Web TimeSheet:

Fixed in both editions of Web TimeSheet

- Fixed issue that prevented Web TimeSheet from installing on Windows 2000 Professional/Server with Service Pack 4. (65912)
- Using the import utility, users can now import files for which a non-required drop-down user defined field value is not specified. (65590)
- Fixed issue that prevented a new password from being saved in the browser after a forced password change. (65599)
- Duplicate approval paths are no longer created when users upgrade from Web TimeSheet version 7.5, and have approval paths including multiple approvers and specific users. Plus, any existing duplicates will be removed. (65521)
- Users can now upgrade Web TimeSheet if they have seats assigned for an unlicensed module. However, upgrade is still prevented when more seats than are available are assigned for a licensed module. (65780)
- If a user sorts a column by clicking it, and this erroneously alters the column grouping, those changes will no longer be saved to the database. (65643)
- Fixed issue that caused a failure in the Web TimeSheet service. (66459)

Fixed in the Project & Billing Edition

- In the Project & Billing edition, users' e-mail notifications on the **Edit User** page now display as enabled. (65709)
- Users can now enable the **Department Code** field in the **Task Assignment Details** report (and in the migrated **Task Assignment Details (Classic)** and **Task Assignments (Classic)** reports) without an error occurring. (65469)
- Fixed issue that caused duplicate records to display in the **Timesheet Billing** pivot report for projects using bucket method multiple client cost allocation. (64697)
- Fixed issue that caused **Project Actual Hours** to be summed incorrectly in the **Timesheet Analysis** report. (65147)
- The *Billable* and *Nonbillable* options are now available in the **Select View** drop-down of the **Expense Amount Summary** report when *Show project cost data* permission is disabled. (65266)
- Approvers can now see the progress bar in users' timesheets, as expected. (65284)
- Fixed issue that allowed an external user to view Productivity graphs. (65347)
- The **Project Status** and **Timesheet Details** reports now display the correct values for **Project Remaining Hours**. (65784, 66065)
- In the **Productivity Summary** report, the monthly productivity target is now calculated correctly for users who change departments mid-month. (65488)

Fixed in the Time & Attendance Edition

- In the Time & Attendance edition trial, all expected reports are now included, and the expected default theme is now used. (65871)
- Fixed issue that caused a non-prorating time off policy to accrue incorrectly when a new policy came into effect. (65960)
- Time off bookings of more than one day whose first day is not shown (due to too many bookings) now display in the month view of the **Time Off Calendar**, as expected. (65769)
- In the **Time Off** pivot report, standard users can now only view their own time off, and supervisors can now only view time off for themselves and for those they supervise. (65467)
- Changes are now saved when a user modifies the **Number** and **Currency** settings in an ADP export report. (65407)
- Fixed issue that prevented users from booking time off in some instances when their maximum overdraw limit would allow for it. (65444)

Fixed in Version 8.5

The following issues are fixed in Version 8.5 of Web TimeSheet.

Fixed in both editions of Web TimeSheet

Administration

- Top-level permission categories (**Administration**, etc) on the **Edit Permission** page now display correctly as either enabled or disabled automatically. That is:
  - If all sub-permissions are enabled, the top-level permission is enabled
  - If all sub-permissions are disabled, the top-level permission is disabled
  - If some sub-permissions are enabled, the top-level permission displays as partially-enabled. (63603, 62262, 57912, 57906, 57240, 57077)
- Web TimeSheet now warns users if they are making a change (for example, adding a user, or changing a license assignment) that will require more licenses than are available at that time.

- The closing lines of the **Timesheet is waiting for approval** e-mail notification are no longer displayed on one line. (64198)
- Fixed issue in user Quick Add feature that prevented the login name from being automatically generated after the user entered a first and last name. (62125)
- Fixed issue in Internet Explorer 6 that prevented the **Save** and **Cancel** buttons from being visible on the **Mass Edit Confirmation** page. (63696)
- Fixed issue that caused an error to occur when the user changed a password. (64642)
- Time off e-mail notifications are now disabled in the user profile if the Time & Attendance license is removed from the Web TimeSheet installation. (64608)
- An error no longer occurs when e-mail notifications with an empty **Reply To** field are sent; the **Web TimeSheet E-mail address** (from **System Preferences**) is used instead. If that is not available, no **Reply To** address will be included. (64522)
- An error no longer occurs when the user saves any report as a public report with a permission profile not assigned to the user. (64809)

Timesheet

- A **Send Manually** button is now available in offline timesheets for use in cases when the Mailto option does not work correctly. Selecting this button opens the timesheet message contents in the body of the e-mail (rather than in an attached file). (64933)
- In Firefox 3.0, when a user attempts to save a timesheet with a value greater than their hours per day setting entered for a day, those hours are now saved successfully and a blank page no longer displays. (65005)
- An error no longer occurs when a user manually sends an offline timesheet that includes data exceeding 2083 characters. Now, for such messages, an e-mail message will automatically open, and users must then copy and paste the text manually into it. (65148)

Reports

- Employee type user defined fields are once again available in the **User Profile** report template. (63720)
- Fixed issue that caused an error to display in the log file, and Web TimeSheet to erroneously send an e-mail notification stating that the report failed to generate, when a scheduled report was run. (64600)
- Disabled users are no longer erroneously listed in the **Send Report To** field on the **Schedule a Report** page. (64264)
- For Oracle 10 users, addressed an issue that impacted report generation performance. (64700)
- If a user no longer has access to an employee (due to hierarchy filtering) because the user has changed departments, an error no longer occurs when the user attempts to edit a scheduled report that includes that employee. (64757)
- A scroll bar is now available in the **Report Folders** box, on the **Manage Reports** page, when enough folders are added to require one. (64738)
- Users can now manage folders that contain graphical reports that cannot be used because the user's licensing or system setup does not allow it. (65164)

Installation, etc

- For those using the internal web server, *rt.exe* is no longer included in the URL. This allows those running Web TimeSheet on client sites that block URLs that contain *.exe* to access the application. (59501)

- Addressed Javascript caching issue that caused errors to occur.
- Fixed issue that caused installation to time out; time out value has been increased from 30 to 300 seconds. (64207)
- Fixed issues in Oracle that caused upgrades to fail when moving data to a new database (migrating data). (64297)
- An error no longer occurs in the installer if the user changes the name “Default Web Site” in IIS, and then attempts to upgrade. (64793)
- If the **Edit Report** window is already open when the user selects the reports **Settings** button, it now moves to the front. (63703)

Fixed in the Project & Billing Edition

Projects

- In the **List Projects** page, the user’s selected **Display** option (either *My Projects* or *All Projects*) is now retained between sessions. (63649)
- Fixed issue that caused the productivity refresh to run indefinitely. (64433)
- Fixed issue that caused duplicate rows to display on timesheets for projects using bucket method client allocation. (64273)
- Closed projects are no longer available for selection in the **Client/Project** drop-down in the **Add/Remove Tasks** window. (65135)

Timesheet

- Fixed issue in Internet Explorer that prevented the user from adding tasks to the timesheet via the **Add/Remove Tasks** window. (65244)

Reports

- Fixed issue in the **Project** reports filter that allowed users to view data for projects that they did not have permission to view. (64142)
- The **Detailed (Task-User)** report now gives correct values for the **Cost Amount** field for projects using the cost allocation for multiple clients billing method. (64210)
- Expense type user defined fields are once again available in the **Expense Billing** report template. (63717)
- Fixed issue that caused the **Project Status** pivot report to display detail information instead of summary information. (63701)
- Fixed issue involving the **Project Time Analysis** report that caused data to be erroneously filtered for timesheet rows with no time entered, even when using **Task Time Entry Status** of *<ALL>*. (59205)
- **Cost** and **Billable** amounts now display correctly in the **Detailed (Task User)** and **Timesheet Billing** reports for projects with multiple clients using cost allocation. (65105)
- When time is entered against two or more projects with different approvers in a timesheet, the **Approved By** column in the **Timesheet Detail** report now shows the correct approvers. (62826, 62827)
- The **Timesheet Analysis** report now sums **Project Actual Hours** correctly. (65147)

Integrations

- Users can now save updated settings for QuickBooks exports without an error occurring. (64371)

- Fixed issue in the **Project Raw Data** export (XML version) that caused some data to be duplicated and misplaced. (64161)
- The **Integrations** tab is no longer erroneously available to external users after migration. (63876)

Fixed in the Time & Attendance Edition

Administration

- *Activity Selection Required*, the more restrictive option, now takes precedence over the *Activity Selection Not Required* permission, as expected. (63673)
- Web TimeSheet no longer erroneously allows users to create two time off policies for the same time off type that have the same effective date. (64017)
- Fixed issue that caused an error to occur if, when adding a user, the user clicked the **Add**, and then the **Done** overtime rule buttons, and then selected **Save**. (64319)
- Fixed issue that prevented dates from displaying correctly in the **Time off booking is waiting for approval** e-mail notification. (64187)

Timesheet

- If a user is assigned a permission type in which *Activity Selection Not Required* permission was enabled via selecting the Timesheet permission checkbox, that user will no longer erroneously be prompted to enter time against an activity. (82008)
- Users are no longer prompted to enter data for required drop-down time off user defined fields on timesheets that have no time off entries. (64947, 64800)
- Users can once again save time off entries for 0 hours entered directly in a standard-format timesheet, providing they include comments. (64660, 65006)

Time Off

- If an approver does not have a Time & Attendance seat assignment, any time off bookings submitted to them for approval are now system approved. (62986)
- Fixed issue that caused time off remaining to display inaccurately on the **Time Off Calendar** for users whose hours per day was something other than 8. (64545)
- Time off remaining now displays to 2 decimal places on the timesheet, as expected. (62712)
- Users with **Edit/delete future time off bookings** permission can now edit or delete bookings for the current day. (64583)
- iCal feeds of time off data are now disabled for users not licensed for the Time & Attendance Edition, who do not have iCalfeed permission, or who are disabled in the system. They are also now disabled before the user's start date, and after the user's end date. (63685)

Reports

- Groupings in the **Time Off Schedule** report now sort first by **Start Month**, and then by **Start Year**, by default, yielding results sorted in chronological order. (64523)
- Duplicate rows no longer display in the **Time Off History** report when Hierarchy Filtering is enabled and the user belongs to multiple departments. (64564)

Integrations

- ADP exports are now generated in CSV format, regardless of the user's **Report Excel Export Format** setting. (64755)

Import Utility

- Users can no longer import a booking for ¼ day if the minimum time off resolution is set to 1 day using the import utility; Web TimeSheet now verifies that bookings meet the minimum resolution requirements before import. (63020)
- The import utility now imports successfully if the *PayCodeCode* field is missing from the *PayCodeAdd* command; however, an error will be logged. (62701)
- Time off settings can no longer be added via the import utility for users who do not have a Time & Attendance license seat. (62886)
- Proper errors are now logged when users attempt to import, via the import utility, invalid data associated with the following command types: PayCode, TimeOff, TimeOffCode, User, UserActivity, UserDepartment, and UserVacation commands. (63843)
- The *Startdurationtype* field is now a required field for #Timeoffupd imports using the import utility, as expected. (63021)
- Users can now use the import utility to modify reset maximums, the booking required option, and the carry over balance option when adding or updating time off types or time off user policies. (64194)

Web TimeSheet Billing Integration for QuickBooks Version 4.2 Release Notes

New in Version 4.2

The following new features are available in Version 4.2 of Web TimeSheet Billing Integration for QuickBooks:

- **Support for Integration with Web TimeSheet 8.5**
  Version 4.2 of the Integration Manager supports integration with Web TimeSheet version 8.5, Project & Billing Edition.
- **Support for Automatic Upgrades**
  With Version 4.2, the Integration Manager is enabled for automatic upgrade to later versions. If you launch the Integration Manager and upgrade to a version higher than 4.2 is required, that upgrade will occur automatically.

If you are using the Web TimeSheet Integration Manager for QuickBooks for payroll purposes or for automatic client invoice generation, you should not convert to Web TimeSheet Billing Integration for QuickBooks as it is focused only on billing to ensure ease-of-use.

Fixed in Version 4.2

The following issues are fixed in Version 4.2 of Web TimeSheet Billing Integration for QuickBooks:

- The **Hourly Cost** field mapping has been re-added. It was erroneously removed in Version 4.0. (63250)
- The Integration Manager's installer now first ensures that Visual C++ library is absent on the user's machine before installing it. (62971)
- If the Integration Manager fails to start because QuickBooks is closed, a message now displays that indicates users should open QuickBooks before starting the Integration Manager. (63158)
- The Integration Manager no longer erroneously identifies the user as a non-administrator when they include one or more capital letters when entering their login name. (64206)

- If a user selects the **Do not ask me again** check box from the transfer confirmation message box that displays when performing a transfer, that option will be updated under **View/Edit Options** and no confirmation prompts will display for any transfers. (63543)
- When the user selects *Both* from the login types filter in the Vendors Transfer Wizard when transferring from Web TimeSheet, users without a Project & Billing seat assignment no longer display as being available for transfer. (63564)

Intuit QuickBooks Version Compatibility

The following versions of Intuit QuickBooks are supported for use with Web TimeSheet version 8.5.

- QuickBooks Pro or Premier U.S. Edition 2008, 2007, or 2006
- QuickBooks Pro or Premier Canadian Edition 2008, 2007, or 2006 with latest patch
- QuickBooks Pro or Premier UK Edition 2008
- QuickBooks Enterprise Solutions U.S. Edition 8.0, 7.0, 6.0, or 5.0
- QuickBooks Premier Canadian Multicurrency Edition

Integration Manager for Microsoft Project Version 4.2 Release Notes

New in Version 4.2

The following new features are available in Version 4.2 of the Integration Manager for Microsoft Project:

- **Support for Integration with Web TimeSheet 8.5**
  Version 4.2 of the Project integration manager supports integration with Web TimeSheet version 8.5.
- **Option to create a custom formula for mapping resources and users**
  This option allows those with a fixed resource name format that does not match the three name formats available in past versions of the Integration Manager to transfer resources in their desired format.
- **Option to select the authentication type of new users created in Web TimeSheet**
  Users may select any of the following authentication types to apply to newly-created users in Web TimeSheet, provided they are enabled: Web TimeSheet Internal, Windows NT Domain, Active Directory, and SAML authentication.
- **Option to prevent closed Web TimeSheet projects from displaying in the project transfer fields**
  Users can now select the **Hide closed projects** check box that causes closed projects to disappear from both the **Available** and **Selected** projects lists, which improves the Integration Manager's usability and performance.
- **Support for transfer of non-English Published projects with Project Server 2003**
  Only published projects are listed as being available for transfer in the Integration Manager. Any published projects that do not use the default Published version tag, such as non-English published projects, will not appear in this list. Users can now transfer these projects to Project Server 2003 by changing their version tag so that the Integration Manager recognizes that they are published.

Fixed in Version 4.2.1

- Users can now open the Std/Pro version of the Integration Manager without opening Microsoft Project, and then click **Cancel** when prompted to open Project, without an error occurring. (66280)
- Fixed issue that caused the Integration Manager to hang when connecting to Microsoft Project Standard when the Integration Manager’s login page is accessed by selecting **Tools** > **Web Timesheet Integration** in Project. (65474)

Fixed in Version 4.2

- When the Integration Manager updates information for existing users in Web TimeSheet, login names and passwords are no longer updated. (58574)
- Users can now select the **Connect** button on the **Configuration** tab while the **Summary Task Information** dialogue box is open in Project 2007 without an error occurring. (63171)
- If the user attempts to transfer a login name to Web TimeSheet that already exists there, but is associated with a different first and/or last name, the transfer is now halted and an error message is logged. (62688)
- If a large number of projects are transferred to Project Server in one batch, each project is now checked in (that is, users are allowed write permission for the project) immediately following its transfer. (64956)

- Fixed issue that caused an error to occur when the user transferred a project with a large number of tasks to Microsoft Project, after an interrupted attempt to transfer that project. (64441)
- If a user using Windows NT authentication changes their password, automatic updates will now still proceed successfully. (59221)

Microsoft Project Version Compatibility

The following versions of Microsoft Project are supported for use with Web TimeSheet version 8.5:

- Standard 2002, 2003, 2007
- Professional 2002, 2003, 2007
- Server 2003, 2007

Replicon Product Version Compatibility
